

## Low Code Development:

\* Limited Customization - option a get pulled

\* Vendor dependency

\* Licensing cost for enterprise platform

Procedure:

1. Create a new account and  
2. Create a new project

## Result:

Thus, the Comparison of traditional and Low Code development has been Completed Successfully

# Advantage of Traditional vs Low Code

## Traditional Development:

- \* Highly Customizable
- \* Suitable For Large and Complex projects
- \* Supports advantage integration

## Low - Code Development:

- \* Faster application development
- \* Requires less coding knowledge
- \* Requires development cost

## Disadvantages of traditional vs Low Code:

### Traditional Development:

- \* Time Consuming
- \* Requires skilled developers
- \* Longer testing and development

process

Exp-1

# Comparative study of Lowcode development Versus traditional application development approaches

## Aim:

To compare traditional application development and low code application development based on their features, advantages and disadvantages.

## Features of traditional vs Low Code:

| Traditional development                                                                                                                                                                                                                                                                    | Low-Code development                                                                                                                                                                                                                            |
